

HUSSL

ST8

DESIGN: EOOS

ST8 is distinctive, comfortable, and light-weight.

The design redefines the traditional frame construction, shaping the character of the chair. This design approach starts from the heart of the chair, creating a unique aesthetic from the inside out. An archetypal wooden chair, reinterpreted.

Chairs and tables from the UMLBERG

Designers Martin Bergmann and Gernot Bohmann from EOOS presenting the 'ST8' model at the 'Villa Beer' in Vienna.

The backrest, seat, and frame are made from thin cellulose panels with two veneer layers and then processed on-site with a five-axis milling machine. The legs are made of solid wood.

Up to six chairs can be stacked on top of each other.

ST8 was designed by EOOS and is manufactured entirely in Umlberg. Thanks to in-house production eliminates the need for external suppliers and long transport routes.
